# INNOVATIVE ENGINEERING – SUSTAINABLE IMPACT

## NEW: ATE SecuBrake

The first brake fluid made with  
renewable raw materials.  
Order now and get on board  
with the pioneer!

Brakethrough Technology

# FOCUSED ON ECOLOGY

## ATE SecuBrake – without boric acid esters, with renewable raw materials

ATE SecuBrake is the new, pioneering brake fluid that combines sustainability\* and safety. For the first time, it meets the legal requirements for a DOT 4 brake fluid without containing boric acid

esters, and it is manufactured using a certified process with renewable raw materials. The result is a CO<sub>2</sub> footprint that is significantly better than that of conventional brake fluids.

## The first in a new generation

ATE SecuBrake, which is free of hazardous materials subject to labelling requirements and produced with renewable raw materials, sets new standards in environmentally friendly mobility. This innovative brake fluid makes everyday workshop life much simpler because it requires no legal protection measures for handling and storing hazardous liquids.

Thus it is the first brake fluid to successfully combine sustainability and work safety.

## For a sustainable future

ATE SecuBrake is the result of innovative development work by the brake specialist ATE. This sustainable brake fluid meets customer demands for environmentally friendly production. Certified and with a significantly improved ecological footprint, it points the way to a sustainable future.

ATE SecuBrake appeals to new, environmentally conscious target groups and shows your commitment to sustainable mobility.

### BENEFITS

- I Eco-friendly:** free of hazardous materials subject to labelling requirements
- I Sustainable:** through the use of renewable raw materials and local production – Made in Germany
- I Safe:** simple handling and storage
- I Top quality:** guaranteed by regular checks
- I Ready for the future:** provision for possible stricter EU regulations on brake fluids

# COMMITTED TO PROGRESS

### Sustainable production

Production is based on a certified manufacturing process using renewable raw materials. This results in a significantly improved CO<sub>2</sub> footprint.

### Constituents not subject to labelling requirements

ATE SecuBrake contains no borate esters. This equates with easier handling in the workshop, less environmental impact, and health benefits – because, unlike conventional brake fluids, there is no risk of impairing fertility or harming an unborn child.

### Quality control

Regular quality controls ensure that ATE SecuBrake complies with legal requirements and associated standards and specifications.

### Additional sales opportunities

According to a study commissioned by Continental in December 2023, sustainability is important to the majority of car drivers in Europe (72%). ATE SecuBrake gives you a more effective way to appeal to this target group.

Choose ATE SecuBrake for the sake of the environment. Visit [www.ate-brakes.com/secubrake](http://www.ate-brakes.com/secubrake) for details.
